

SITECORE ARCHITECTURE PLANNING

Business critical applications rarely fly solo. Build for the future.

Service Description

Have you recently purchased Sitecore? Planning for it soon? Build a streamlined infrastructure that optimizes Sitecore, prevents scalability failings and glides safely alongside your other business critical applications. If your organization serves multiple sites, demands high availability, or requires systems integration, this service gets you where you need to go. Aware will deliver a proper architecture design that allows for scalability, high performance and redundancy to launch your site with confidence.

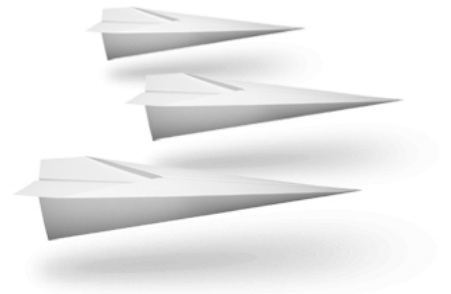

Your comprehensive System Architecture Diagram and Validated Deployment Plan will provide recommendations in the following areas:

- CMS Environment
- Delivery Environment
- Staging Environment
- Database Server
- Database Server (DMS)
- Development Environment
- Deployment Methodology
- Security (AD)
- Firewall Configuration
- Load Balancing
- Hot/Cold Failover
- 3rd Party Integrations

Deliverable

System Architecture Diagram and Validated Deployment Plan

Benefits

- Allow for scalability
- Prevent performance bottlenecks
- Build in redundancy
- Prevent costly rework
- Avoid functionality limitations
