

SITECORE BEST PRACTICES AUDIT

We've been in the trenches. Leverage our expertise to protect your Sitecore investment.

Service Description

Congratulations! Your in-house developers launched their first site, fresh out of Sitecore boot camp. But now you want to validate the deployment—or perhaps something seems amiss after working with an external implementation vendor who did the deployment. After countless implementations, Aware has learned what works (and what doesn't) in real-world Sitecore implementations. Our solution architects will scout out your current situation and recommend ways to protect and defend your Sitecore investment.

Your comprehensive Sitecore Best Practices Audit Report will provide recommendations in the following areas:

- Site(s) overview
- Information Architecture
- Template Architecture
- Presentation Settings
- Page Editor
- Globalization
- Security
- Configuration
- OMS/DMS
- Modules
- Integrations
- Source Code Architecture
- Server Architecture
- Performance Evaluation
- Errors & Error Handling

Deliverable

Sitecore Best Practices Audit Report and Recommendations

Benefits

- Protect your investment
- Mitigate performance risk
- Validate your deployment
- Preserve upgrade paths
- Best practice mentoring
